Teodor Vasilev

Junior Software Engineer/ | Student /Eleventh grade/ | Javascript, PHP, Lua

Sofia, Sofia City, Bulgaria

Summary

Teodor Vasilev – Software Developer & IT Enthusiast

Highly motivated high school student passionate about software development. Started programming early, gaining substantial experience in backend, frontend, and system architecture.

Technical Expertise & Projects:

Full-Stack SaaS Development

Built functional SaaS solutions including:

- ERP system
- Marketplace android platform for my schools market. Handle both backend logic and frontend interfaces for seamless integration and optimal performance.

Automation & Security Development

Developed the official website for my school's Student Council with user-based approval automation, audit logging, and encrypted data storage for security and accountability.

SpeechWave Transcriber (C# & WPF)

Modern offline speech-to-text app using OpenAI's Whisper for accurate Bulgarian transcription. Features Material Design UI, MP3 support, and local processing.

- High-accuracy Bulgarian transcription
- Local processing ensures privacy

Lua Scripting

Developed numerous FiveM scripts enhancing game mechanics, optimizing server performance, and creating custom functionalities

for unique roleplay experiences on a server that had over 10 000+ unique users.

CS2 Snap Tap Emulator (C#)

C# application emulating Snap Tap for CS2 players without hardware support. Enables precise counter-strafting movements like high-end gaming keyboards. Completely undetectable by VAC anti-cheat, allowing safe usage without penalties.

SQL Injection Scanner (Python)

Vulnerability scanner detecting SQL injection, XSS, and CSRF in web applications. Supports authenticated scans, endpoint discovery, and detailed report generation.

- Detects multiple vulnerability types
- Handles authenticated scanning
- Comprehensive vulnerability reports
- Modular design for extensions

Bulk Email sender

Tech highlights:

- Adaptive batching & timing to bypass rate limits
- Optimized SMTP with retries & error handling
- Sanitized configs, secure creds
- Async live monitoring

Bypass tactics:

- Multi-account load balancing
- Spam-aware timing & formatting
- App password support

Problem-Solving Mindset

Analyze, optimize, and resolve software challenges efficiently—debugging complex systems, optimizing databases, and improving security layers with robust solutions.

Driven by Growth & Innovation

Thrive in collaborative environments with innovative ideas. Strong ability to understand complex problems, design effective solutions, and implement efficiently. Passionate about technology with deep understanding of software architecture.

Experience

Puls.bg

Content Writer

August 2023 - January 2024 (6 months)

Sofia City, Bulgaria

- I've written over 21 medical articles, each exceeding 600 words.
- I shared my knowledge of fitness, supporting it with numerous studies and key findings in the medical field.
- I'm the first and only teenage writer — and the only one without a medical degree — contributing medical articles.

- Words from the Editor-in-Chief:

“Teodor Vasilev is one of the few exceptionally young individuals passionate about fitness who dives deep into academic literature. He possesses the rare ability to express complex knowledge in written form, combining logic, depth, personal insights, and analytical thinking.”

Education

Vocational High School of Telecommunications

High School Diploma, Economic Informatics · (2021 - 2026)
